

WHALE-WATCHING FROM SHORE

THE ADVANTAGES

Viewing whales from land is less stressful for the animals

Great way to combine multiple activities (hiking, cycling, reading, picnic)

SPOTTING WHALES

- **Ideally in teams of two**

One person patrolling with his eyes
The other with his binoculars

- **Try to spot whale spouts**

Whale spouts resemble large white columns or “explosions of water” above the horizon

Near the spout, scan the water surface and try to spot the back of the whale

Stay alert!

- Whales must always resurface to breathe, but can cover considerable distances in a single dive

STAY CAREFUL!

Refrain from venturing too close to the water and beware of exposed boulders at low tide which can be quite slick

WHERE TO SPOT WHALES?

Visit
